

# RS200 Room Probe

Last Modified on 11/12/2021 8:06 am EST

The Room Probe (RS) is designed with a semi-flush mounted cover that can be optionally painted to match the interior room finishes. The RS interfaces with the Air Data Router (ADR) for room level sensing of a multitude of environmental parameters including discrete temperature, and for drawing air samples back to the Sensor Suite (SST). The sensor configuration of the SST and the installed Cable/Tubing will determine which parameters the Aircuity system will detect. Refer to the OSC Structured Cable (OSC100) and OT Tubing (OT100) data sheets for a guide to selecting the appropriate options.
