SSSCOM Sensor Suite Sensors: Carbon Monoxide

Last Modified on 11/12/2021 8:10 am EST

Sensor Suite Sensors enable the Aircuity system to cost effectively monitor and control a breadth of environmental parameters throughout a facility. Located within a Sensor Suite, the sensors evaluate an array of environmental conditions using a shared sensing architecture. In lieu of locating individual discrete sensors in each space, the Aircuity system gathers air samples from the spaces and multiplexes them across the Aircuity network back to the Sensor Suite for analysis.
