AWP200 Architectural Wall Probe

Last Modified on 11/12/2021 8:07 am EST

The Architectural Wall Probe (AWP) is designed with an architecturally pleasing semi-flush mounted cover and interfaces with the Air Data Router (ADR) for room level sensing of a multitude of environmental parameters (excluding temperature), and for drawing air samples back to the Sensor Suite (SST). The sensor configuration of the SST and the installed Cable/Tubing will determine which parameters the Aircuity system will detect. Refer to the MicroDuct® Tubing (MD100), OSC Structured Cable (OSC100) and OT Tubing (OT100) data sheets for a guide to selecting the appropriate options.
