

DPB300 Duct Probe

Last Modified on 03/28/2025 3:33 pm EDT

The 300 series Duct Probe (DPB300) can be mounted directly on a duct and interfaces with the Air Data Router (ADR) for drawing air samples back to the Sensor Suite (SST). The sensor configuration of the SST and the installed Cable/Tubing will determine which parameters the Aircuity system will detect. Refer to the MicroDuct® Tubing (MD100), OSC Structured Cable (OSC100), and OT Tubing (OT100) data sheets for a guide to selecting the appropriate options.

Please note: Platinum Resistance Temperature Detector not available on DPB300 series. Refer to DPB200 for temperature options.
